Proportional change in natural land cover 1950-2005

■ -0.550742

■ 0.342494

The yellow dots indicate 305 populations from the LPI dataset of 254 species from 54 locations.

The grey scale indicates the proportional change in natural land-cover from 1950 to 2005 using the HYDE dataset. Grey values indicate no change.
